Arteco NEXT

SEE the DIFFERENCE

Arteco Next provides easier and more efficient management of all integrated solutions with four different VEMS licenses: Arteco Pure, eMotion, Active, and Extreme.

Conceived with the aim of providing a unique platform for the management of various applications and devices in the world of security and automation, Arteco NEXT is the ideal tool for managing, monitoring, and immediately accessing countless devices.

Designed to give each user an immediate, flexible, interactive, clear and dynamic experience, Arteco NEXT fits perfectly in many different fields of application, operator requirements and environments.

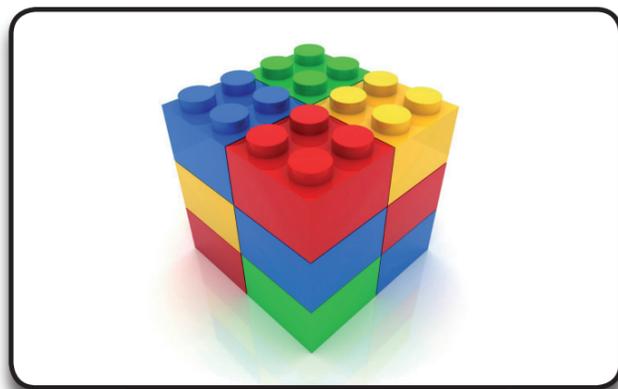

OPEN

The open architecture of Arteco NEXT allows interfacing the Arteco VEMS with third-party software applications or integrate security solutions, such as fire detection systems, anti-intrusion, access control, home automation and many others.

VERTICAL MARKETS

Arteco NEXT is a complete platform, which, thanks to its functionality and the endless possibilities of integration with other applications, is perfectly suited for being used in different areas, from the residential to the industrial, through the world of logistics or retail, to countless others.

FLEXIBILITY

The Arteco NEXT interface is fully customizable and is designed to fit every need. With its customizable modules each user can create the layout they prefer to be used on a single screen, or on multiple monitors/video walls.

GLOBAL PRESENCE

The coordination of activities between European headquarters in Italy and in the USA in Saint Louis (MO), combined with the extensive service provided by branch offices in 4 continents, allow Arteco to accompany the customer from designing to implementing the system, providing complete and customizable solutions, with global support coverage.

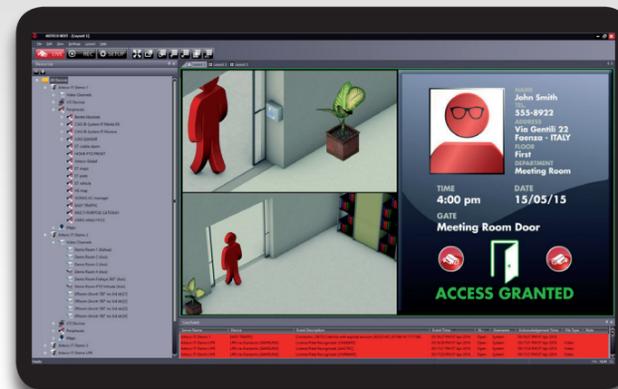

VIDEO ANALYTICS

Arteco NEXT can be interfaced to both native plug-ins and third-party video analytics, allowing the user to configure and monitor his system effectively. Event management has never been so easy.

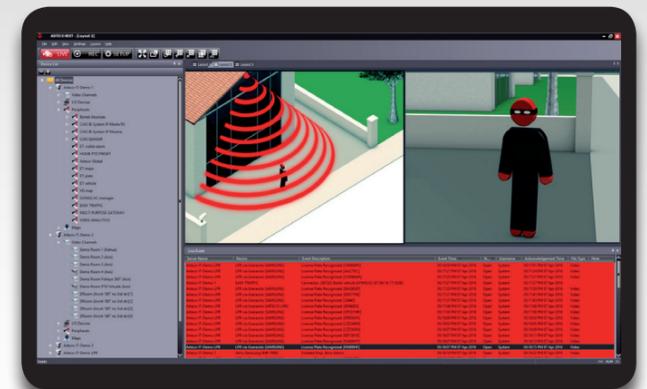

LPR & TRAFFIC

Thanks to Arteco NEXT you can receive data from plate reading cameras or apply the Arteco OCR engine on supported cameras, making it possible to traffic classify events, enable specific functions and manage dedicated solutions for traffic control (counting transit, origin vehicles, etc.).

ACCESS CONTROL

The Arteco NEXT interface offers the user a dedicated and customizable environment for managing the most common access control systems. From simply receiving events to integrating different devices, the platform Arteco gives the user maximum clarity awareness of what is happening.

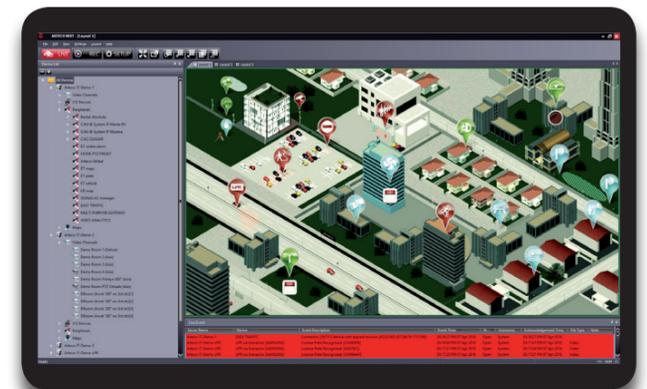

INTRUSION AND PERIMETER DETECTION

Receiving alarms provided by traditional security solutions or for the monitoring of critical structures are complemented by Arteco either through standard protocols or using proprietary protocols, for a total event management and a bi-directional control of the alarm units.

HOME & BUILDING AUTOMATION

Thanks to its open architecture, Arteco NEXT can integrate all major protocols of home and building automation allowing you to make simple and immediate integrations. Arteco can remotely control an infinite number of devices via Arteco Everywhere, the I/O module that simplifies the interaction between tools and technologies of any type.

MAPS

Arteco Maps lets you organize and locate all the devices installed on a multilevel, dynamic graphical interface, with customizable icons, live & recorded video preview, audio/video events notifications, remote control of devices, displaying the web interfaces of the devices, and more. All clear, immediate.
